## **DETAILED ACTION**

### ***Allowable Subject Matter***

Claims 1-4, 6-12, 14-21 are allowed.

The following is an examiner's statement of reasons for allowance: The Applicant's invention is directed to a method/system of secure key exchange using a trusted platform module, where the module has registers storing keys. The primary reason for allowance of these claims is the recitation within the claims of TPM, trusted platform module, having registers containing first key, second key and first key encrypted with the second key. Although the algorithm is disclosed by Tatebayashi-Matsuzaki-Newman algorithm(see cited prior art), the hardware elements or the fact that this algorithm is used in application and graphics processor environment is neither taught or obvious in cited prior art.

The closest prior art found was 2003/0188179 to Challener et al.(hereinafter Challener). Challner deals with exporting of key stored in TPM containing registers. And when the boot-up sequence occurs the values in PCRs, i.e. registers are compared with values of OS kernel and when there is a match, exporting of key occurs see Abstract. However, Challener does not disclose the algorithm described in the claimed inventions.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany

the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
